### SPECIFICATIONS FOR GRAPHICS

All graphics should be delivered on CD, firewire drive, flash memory sticks or emailed. Files should be EPS or TIFF, but we can work with any common format. Graphics for import directly into Avid should be 720x540 pixels, 72 dpi. When creating graphics, please allow for title and safe action areas.

More often than not, graphic files brought into an edit session need to be revised or changed in some way. If that is the case, please bring all fonts and original Illustrator, Quark or Photoshop files to the session. Our edit suites have graphic work stations for use in session.
